PROGRAMME OVERVIEW

About this programme

Agentic AI moved from chat to work: autonomous digital coworkers now browse the web, organise files, reconcile records and carry tasks across multiple applications. The winners are not the teams with the flashiest demos but those who deploy agents with real permissioning, evaluation and audit. This program trains operations leaders and citizen developers to identify agent-ready processes, build and supervise agents on commercial platforms, and stand up the controls — approval gates, action logs, spend limits — that make autonomy safe at company scale.

OBJECTIVES

What this programme sets out to do
